

Shout out to the Titan Manufacturing team

I am a representative of an OEM manufacturing and design company specializing in the design, manufacturing and sales of outdoor structures, greenhouses and all the systems within.

We typically source many materials overseas, but, I have recently taken to finding local suppliers/vendors/shops to produce and supply materials for us. This eliminates some of the logistic issues and allows for better quality control.

In my search for a vendor for some of our custom plastic products, I came across Titan Manufacturing. All my interactions with Titan have been pleasant and productive. My first visit proved very beneficial. I arrived with questions and samples in hand to determine capabilities. Not only was I told my asks were definitely doable, it was displayed to me how it would be done using sophisticated software. Then I was toured thru the facility to see how the goods are produced and the capacity of the facility.

Since then, I moved forward with Titan and provided the drawings for the goods required. Once submitted, Titan reviewed and pointed out potential issues while providing possible solutions. Titan then produced the molds required well within the lead time quoted and produced sample parts for our review. These were perfect, myself and my colleagues are very pleased with the sample product provided and are grateful for our new found business relationship with Titan Manufacturing.

I will definitely recommend Titan Manufacturing to anyone looking for a great business relationship with a company that is pleasant to deal with, a partner in problem solving and very reliable.
